

SIA "Fortum Jelgava"

Letter of Reference

to Whom It May Concern:

We are writing this letter of recommendation in respect to the services provided to the Fortum Corporation by company OBERON TEHNIKA.

The company OBERON TEHNIKA has successfully completed electrical installation works on Fortum Bio cogeneration plant construction project in Jelgava Latvia. The work included installation of electrical ground cable lines, distribution boards, electrical equipment installation works in substation, and installation of territory lighting system covering more than 30000m<sup>2</sup>.

The company OBERON TEHNIKA has been willing to perform extra works at reasonable pricing while continuing to meet critical deadlines in a very fast-paced project. Company supervisors, engineers and workers can be characterized as high level professionals in electrical works.

Based on the above we would highly recommend OBERON TEHNIKA on any project requiring electrical installation services.

Sincerely,

Riho Kõks

Project Manager
